

Floristic Map Unit Fact Sheet

26851 Alluvium Semi-arid Plains Woodland

Description:

Low altitude, very low rainfall Box-Buloke-Pine woodlands with chenopods and dry grasses.

FMU Type: Restricted

Typical Neighbours:

- 6058 - Darley Gravel Semi-arid Plains Woodland
- 3 - Basalt Semi-arid Plains Chenopod Grassy Savannah
- 25261 - Alluvium river (water area)
- 22928 - Alluvium flats subject to inundation

Conservation status: Corangamite - Naturally restricted and comprehensively cleared - Endangered

Original area: 322 ha. Current estimate 3.0 ha. or 1.0% plus scattered trees, a further 5 ha

Crown Land: Area 5.0 ha.

Largest Reserves (ha): No Reserves

(**Teal font** - Victoria, **Green font** - Corangamite, Header/footer colour = map colour: Majorelle Blue)

Major Localities (past and present)

Lara (0/222 R105 P3), Little River (2/63 R4 P0), Anakie (0/36 R0 P0),

Bracketed figures represents 'A/B' where A =current estimate and B = potential area in hectares. The prefixes R and P show the number of indigenous plant records and photographs held for the locality respectively. Total Area CCMA 322 ha Total Area Vic. 1320 ha.

Key Species

Some or all of these species should be present:

Eucalyptus leucoxylon

Yellow Gum

Indigenous Plant Species List

Species Revegetation Category

A **green dot** indicates Structural revegetation species; the main species that form the structure of the community or the habitat (also known as primary revegetation species).

A **yellow dot** indicates species that can be propagated, at least in small numbers but require the habitat to be established first i.e. the structural species. These are also referred to as secondary revegetation species.

A third category covers water plants - plants requiring waterlogged or flooded soils for at least part of the year. Many of these species are not generally part of the terrestrial Floristic Map Units but may be present in micro habitats (niches) at small scale. These are shown with a **blue dot**.

Some species, although native, are variously excellent colonisers, cosmopolitan or are likely to still occur at the site.

There is generally no need to plant these species which are shown with a **red dot**. Species not considered revegetation species for various reasons are shown with a **pink dot**.

Cover

The average recorded cover value (where known) is shown in **blue** after each species name.

Species FMU Distribution Category

Gx - where G = Generalist, x = number of FMUs species recorded in

Sx - where S = Specialist, x = number of FMUs species recorded in

R1 = Rare, species has to date only been recorded in one FMU

Species Record Confidence

- Superscript **1** after the Scientific Name indicates records for this species represent less than 1% of the total species record for the FMU.
- Superscript **2** indicates there are 20 records or less.
